

ABOUT IT

Expert IT and connectivity services for all business requirements

“We have been associated with 100 Percent IT for several years now and are very happy with the rack space, overall service, quality of bandwidth and more recently with the ‘virtual servers’ provided to us, with the additional benefit in that the 100 Percent IT technical help desk is supported by dedicated network engineers based here in the UK.”

Dr John Dimmock

Media Services Sussex Ltd

About us

Founded at the height of the E-Commerce boom in 2000 by Cambridge University graduate David Blundell, 100 Percent IT started life providing secure Internet access to multi-tenanted office environments.

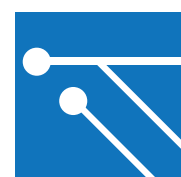

Through a combination of unique research and collaborative networking courses with Cisco, the company pioneered the delivery of secure private networks to multiple companies using a single switch/router. This USP enabled 100 Percent IT to grow rapidly as companies realised the cost savings they could make on equipment whilst retaining high quality secure Internet access.

Research and learning never stops at 100 Percent IT and we invest heavily in our networks and staff training. We have a policy of constant improvement in our network design, to deliver more cost-effective and scalable solutions for our clients in the future.

100 Percent IT offers straightforward practical solutions for its business partners and customers. We cut through jargon and implement solutions that our customers really need – leaving them free to focus on running their business more profitably.

Businesses come to 100 Percent IT for a wide range of technological solutions – Internet access, Cloud computing, VoIP, telephone lines, telephone systems, SIP trunks and calls, Office server backed up to a virtual server off site, VPN access to support remote employees, email and web hosting, and of course the consultants who make everything work together seamlessly.

The company's headquarters is in Newbury with a sales office in Leeds.

100%IT

Our network

100 Percent IT has an extensive network which we have grown organically over the last 10 years. It is built on a solid infrastructure of Cisco networking equipment and Dell hardware – standardising means we are specialists in the technology that we use and recommend to our clients.

Our team of experts proactively work on developing the network and minimising any risk of outages. Because many of our clients rely on the network for their day-to-day business operations, we have prioritised the inclusion of high availability and redundant equipment to minimise single points of failure.

The total value of equipment in the 100 Percent IT network exceeds £1½ million and we are expanding all the time.

Harbour Exchange Square

Our datacentres

100 Percent IT has rack space in three datacentres, two in London's Docklands and one in Berkshire. The Docklands datacentres are both purpose built Tier 3 datacentres, delivering high levels of resilience and redundancy. The Berkshire datacentre is located in a former nuclear command and control centre.

To ensure continuous operation, the datacentres have access to redundant high-capacity power supplies, scalable for future expansion. Each site features Uninterruptible Power Supply (UPS) systems, advanced fire protection systems and custom-designed air conditioning.

Access to the buildings, data floors and individual areas is strictly controlled with multiple levels of security.

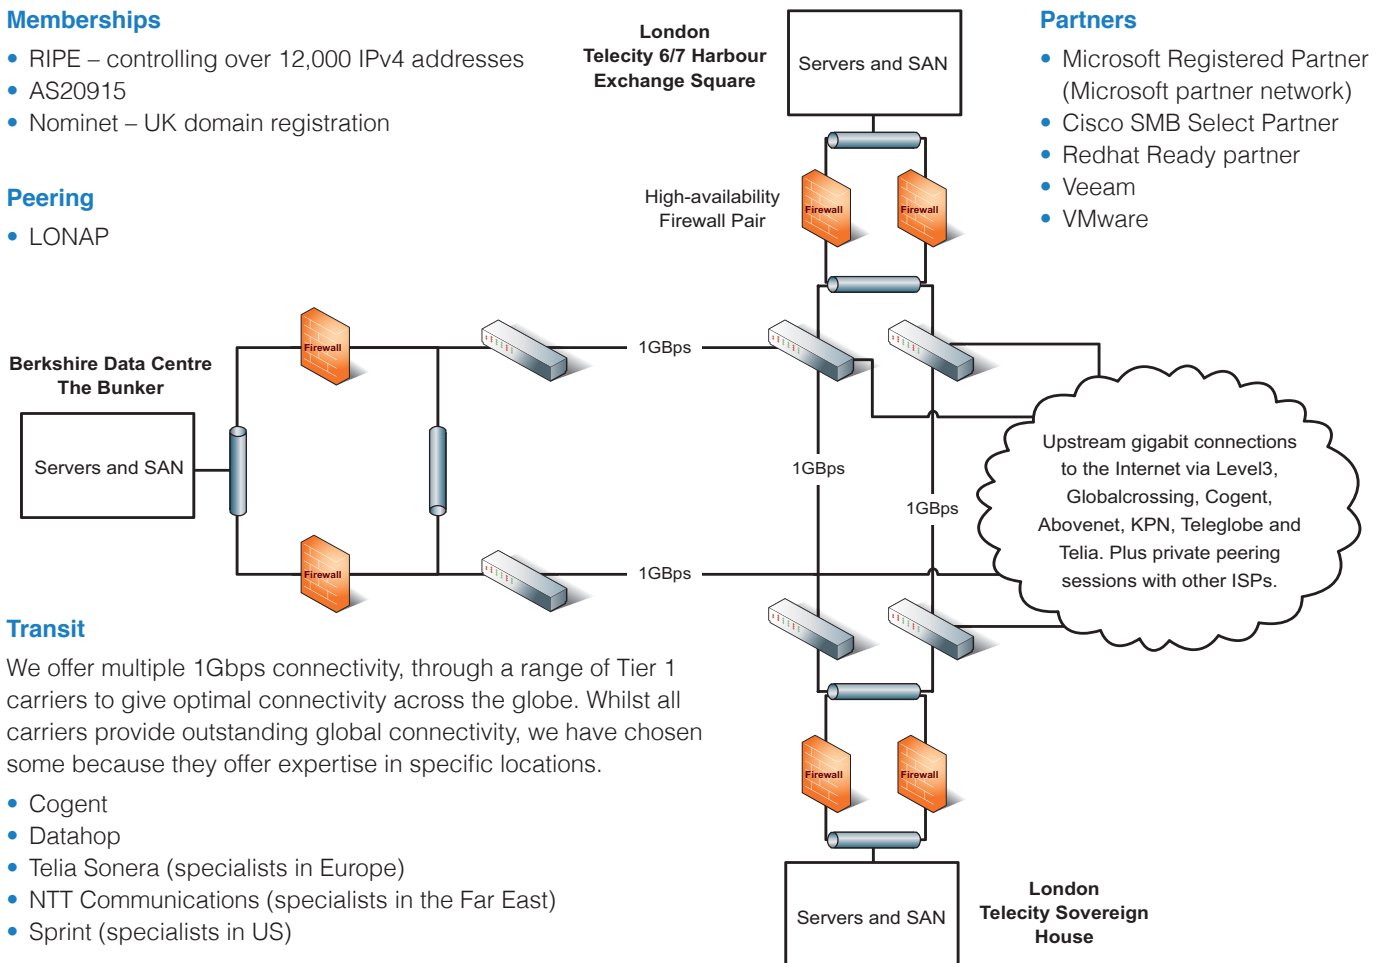

The Bunker, Newbury

Memberships

- RIPE – controlling over 12,000 IPv4 addresses
- AS20915
- Nominet – UK domain registration

Peering

- LONAP

Partners

- Microsoft Registered Partner (Microsoft partner network)
- Cisco SMB Select Partner
- Redhat Ready partner
- Veeam
- VMware

Transit

We offer multiple 1Gbps connectivity, through a range of Tier 1 carriers to give optimal connectivity across the globe. Whilst all carriers provide outstanding global connectivity, we have chosen some because they offer expertise in specific locations.

- Cogent
- Datahop
- Telia Sonera (specialists in Europe)
- NTT Communications (specialists in the Far East)
- Sprint (specialists in US)
